PROJECTS

1) Medical React Project (GitHub: [MediCare Website](#) | Live Demo: [MediCare Website](#))

Description : Developed a responsive medical web application using React to streamline medical data management. The app includes features such as patient data entry, appointment scheduling, and dynamic UI updates for real-time interaction. Utilized React hooks, state management, and custom CSS for a smooth user experience. Focused on creating a scalable and maintainable codebase for future feature expansion.

2) Home Finder (GitHub: [Home Finder](#) | Live Demo: [Home Finder](#))

Description: Home Finder is a comprehensive web application designed to simplify the process of finding and managing housing listings. Built using modern front-end technologies like React, Tailwind, React Router.

3) Edu Pro (GitHub : [Edu Pro](#) | Live Demo: [Edu Pro](#))

Description : EduPro is a professional educational platform developed to provide interactive learning experiences for students and educators. Using React and modern web technologies.
